Cooking Recipes Website: Conception phase

Overview:

This project is a website for storing and viewing cooking recipes. The target group is people who like to experiment with cooking and would like to have a digital space to store their ideas. It mostly targets people who like to cook at home and beginner cooks.

Benefits:

The benefits are having a personal digital "cookbook", quickly adding new recipes, or editing existing ones. The website will have a user-friendly interface, which will allow even people with limited cooking or technological skills to use it efficiently.

Technology:

The front-end technology will be HTML, CSS, and Javascript. The back-end technology will be Firebase, which will mainly serve as a database and identification for users using the website.
